Using rigorous scientific methods, Institutional and Organizational Economics (IOE) focuses on the analysis of the economic impacts and on the evolutions of co-ordination frameworks: institutions, organizations and contracts. Main subjects of investigation cover issues that are essential in the design of efficient public policies and firm strategies. IOE put emphasis on applied analysis to confront the theory to facts to enrich the former accordingly. In addition, it is based on multi-disciplinarity to stimulate cross-fertilisation among political science, anthropology, sociology, management, law, and economics.

#### Main topics will include

- promote the use of appropriate methods to analyze the economics of governance, institutions and organizations,
- provide researchers with up to date synthesis on the evolutions of the research program
- develop networking and cooperation among researchers and among their institutions

#### Eminent scientists in the field will animate the workshop. These include:
